Tyre Changer

1. Introduction:

The full-automatic tyre changer is especially designed for demounting / mounting tyres from wheel rims with providing good solutions for all kinds of special structured tyres. This type of machine can demount/mount bigger and heavier tyres, dimension of tire rims from 260mm to 760mm. Fixing the rims with center flange which provides good solutions for different structure tyres and does less harm for tyres with high adaption, is more efficient and different with the traditional turntable .With the tire lifting device rise-fall the tires automatically this can save labor force of manual handling.The center flange positions rims with the self-locking safety device. The multifunctional help arms operate with automatic special structured mount/demount head.

2. Safety Regulations:

This device cannot be used for other purpose. One must have read this instruction manual carefully and understand it completely before operation. The company shall not be liable for any damage or injury caused by failure to comply with the instruction manual or use it for other purpose.

Warning: This instruction manual is important for the machine, please read carefully before installation and use; also it is important for safe use and machine maintenance of machine. Please keep this manual properly in order to further maintenance of the machine.

Caution: Please use the machine only for purpose for which it is designed, don't use it for other purposes.

Manufacturer shall not be liable for any damage or injury caused by failure to comply with these regulations.

Use of this machine is especially reserved to trained and qualified professional persons, those who already read the introduction manual carefully, or someone have the experience for operating similar machinery. Any changes and beyond the scope of use on this machine without manufacturer's permission or do not according to the manual, may cause the malfunction and damage to machine, manufacturer can cancel warranty coverage for above. If some parts are damaged due to some reason, please replace them according to the spare parts list. (Attention: warranty is one year after manufactures' delivery date; warranty excludes the easy-broken parts). The company shall not be liable for any change of the device without permission. (Especially the electrical parts)

3. Technical data:

Rim Dimension	10"-30"
Max. Wheel Width	16 "
Max. Wheel Diameter	1250mm (45 ")
Working Pressure	8-10bar
Hydraulic Pump Pressure	80-120bar
Power Supply	220V (1ph)/ 380V (3ph)
Motor Power	1.1 kW
Max. Rotating Torque (Turntable)	1078 Nm(110Kg.m)
Overall Dimension	1130*1500*1900mm
Noise Level	<75 dB
Net Weight	500kg

4. Transport:

When transporting, the machine should be with original package and placed according to the mark on the package. For the already packaged machine should be handled with a corresponding tonnage forklift for loading and unloading. The location to insert the fork feet is shown as **Fig 1**.

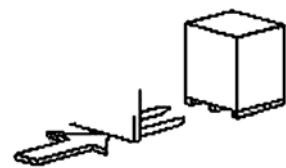

Fig 1

5. Unpacking & Inspection:

Pull out the nail which is nailed on the plate with tip jaw, unpack the carton and plastic cover. Check to make sure all parts shown on the spare parts list are included. If any parts are missing or broken, please contact the manufacturer or dealer ASAP.

6. Workplace requirements:

Choose workplace in compliance with safety regulations. The ground should be flat without rugged situation. The needed work space of the machine is 2.9x2.1m and the min. height is 2.4m. Connect power supply and air source according to manual and workplace must have good air condition; in order to make the machine run well, its workplace requires at least 0.5m clear space from each wall shown as **Fig 2**. If installing it outdoor, it must be protected by roof against rain and sunshine.

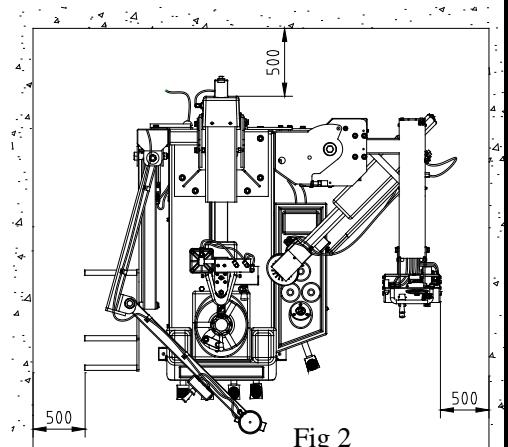

Fig 2

Warning: the machine with motor must not be operated in explosive atmosphere.

Connect the gas and the electrical system. Connect the compressed air connector which is on the right side of the machine with compressed air system. The electric grid that the machine connects to must have fuses protection device and good outer cover grounding protection. Install the leakage automatic air switch on the main power supply.

7. Electric and Pneumatic connections:

Caution: Before installation and connection, check to be sure that the electricity power supply corresponds to the machine technical data. All the installation of electric and pneumatic devices must be operated by a professional electrician.

Connect the compressed air connector which is on the machine back side with compressed air system. The electric grid that the machine connects to must have fuses protection device and good outer cover grounding protection. Install the leakage automatic air switch on the main power supply. Set leakage current at 30mA.

8. Adjusting operation:

The effect picture of the machine is shown as Fig 3.

Notice: Demount the part marked D when mounting/demounting the thicker tyres.

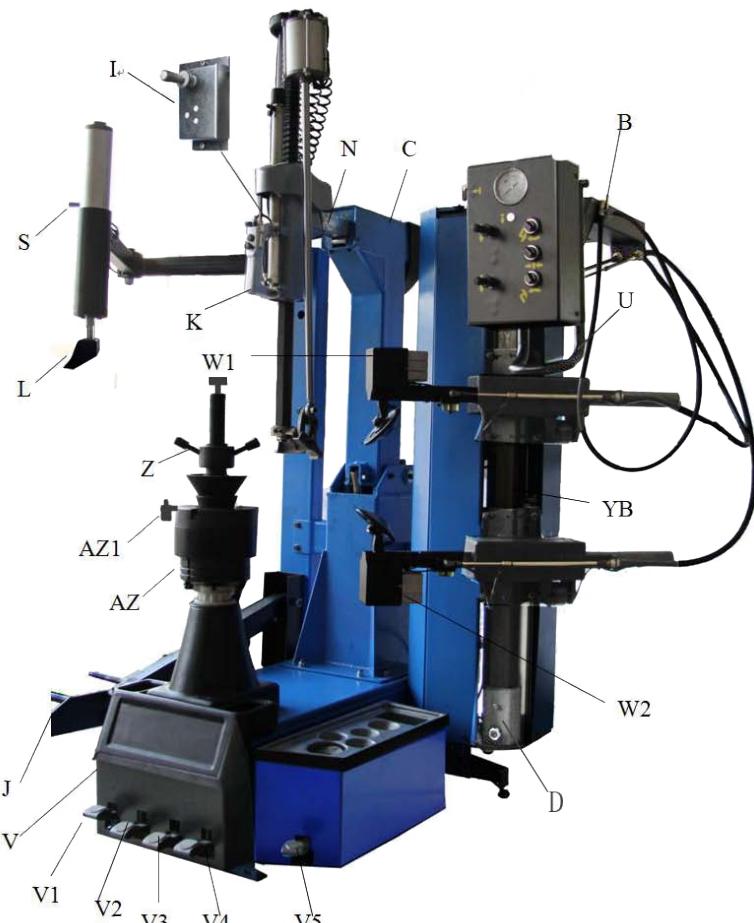

Fig 3

V1: Tilting pedal	V2: Center shaft clamping pedal	V3: Tyre lifting pedal
V4: Rotating pedal	V5: Inflation pedal	U: Pneumatic control box
I: Pneumatic control valve of demount hook	K: Locking handle	S: Control valve
AZ: Installation base	Z: Center shaft and cone sleeve	W1: Tyre pressing roller/rod (up)
W2: Tyre pressing roller/rod (down)	D: Located block	

Caution: Keep hands and body far away from the rotate parts of the equipment during operation. Wear tight sleeve clothing and don't wear necklace, bracelet and loose clothing.

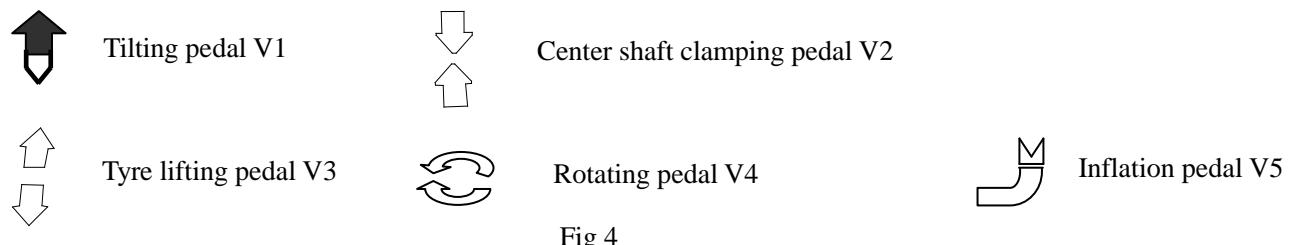

Fig 4

Caution: Before any operations, don't wear loose clothing and wear protective hat, gloves, and skid-proof shoes. Ensure to exhaust the air in the tyre completely, and remove all the balancing weights from the rim.

Operation of pedal (V):

Pedal marks are shown as **Fig 4**

Tread downward the rotation pedal (V4), Installation base (AZ) rotates, Lift up the turntable rotation pedal (V4), Installation base (AZ) anticlockwise rotates.

Tread tyre lifting pedal (V3), Tyre lifting device rises, Tread again, Tyre lifting device move to the original position.

Tread center shaft clamping pedal (V2), The center shaft (Z) is locked tightly, Tread again, The center shaft (Z) is in free state.

Tread the tilting pedal (V1), The column falls backwards, Tread again, The column move to the original position.

Tread the inflation pedal (V5), The inflation hose (B) sprays high pressure gas, Release the pedal to stop inflation, The operation of locking handle(K) is shown as Fig 5

The position K1 uses to unlock the hexagonal rod and sliding arm; The position K2 of hexagonal rod (M) rises;

The position K3 locks the hexagonal rod (M) and sliding arm (N)

The position K4 of hexagonal rod (M) falls.

Operation of tyre changer hook cylinder control valve (I):

Swing the handle of tyre changer hook (F) upward to life it up,

Swing the handle of tyre changer hook (F) downward to make it down.

Operation of the push valve (S):

Swing the handle of cylinder rod (L) upward to retract, Swing the handle of cylinder rod (L) downward to extend.

Operation of the pneumatic control box (U) is shown as Fig 6:

Press U1 to exhaust the gas of tyres, Release U1 to stop exhausting gas.

Wring U3, the tyre pressing rod W1/W2 lock.

Wring U2 and U4 to swing the tyre pressing roller W1/W2 after wringing U3.

Wring U2 and U4 back to swing the tyre pressing roller in the opposite direction.

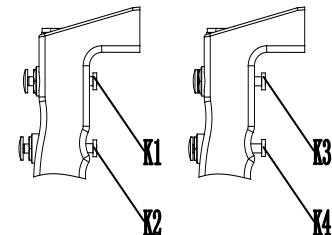

Fig 5

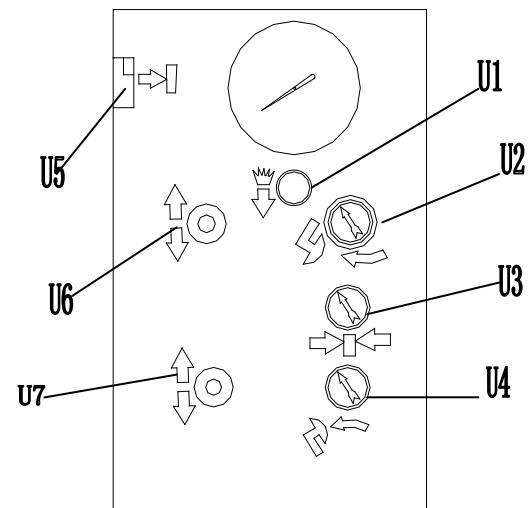

Fig 6

Pull the pneumatic box (U) to retract/extend the tyre pressing rod W1/W2.

When press U5, the right arm (YB) can swing from side to side. Release U5, it swings to the work position and be locked automatically.

Press U6 upward /downward to lift /lower the tyre pressing rod (W1)

Press U6 upward /downward to lift /lower the tyre pressing rod (W2)

Remark: The position of rotary knob shown as picture is acquiescent.

8.1 Demounting the tyres

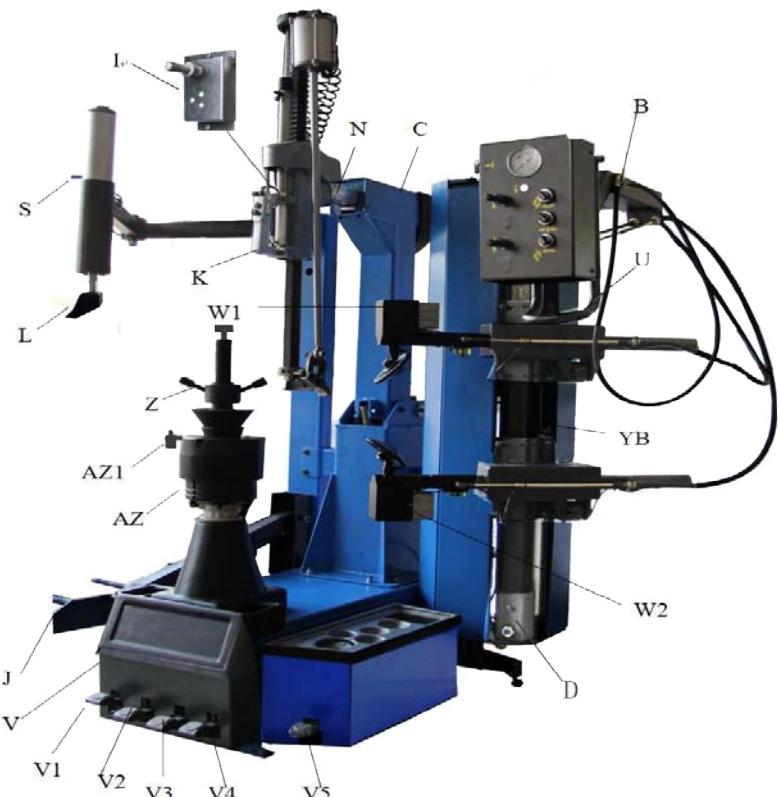

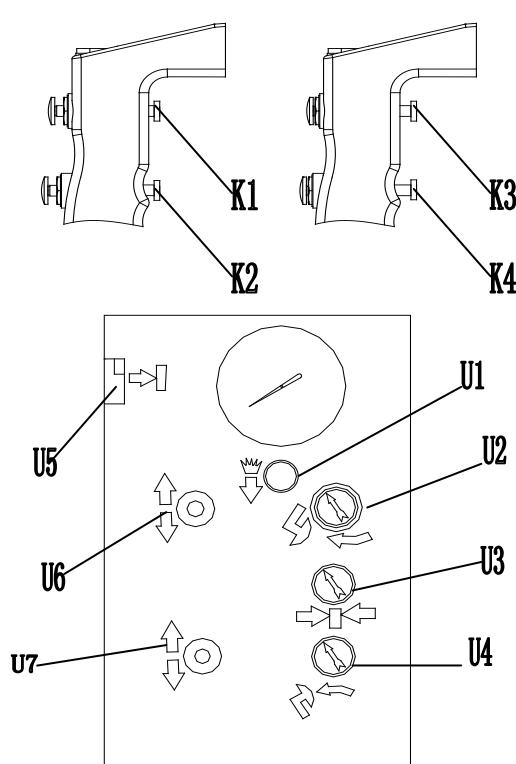

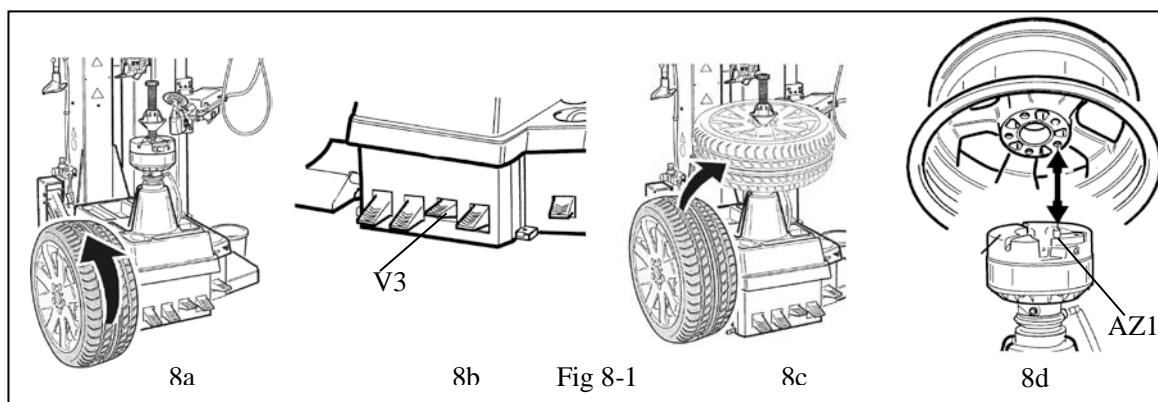

Fig7

1. Install and fix tyre:

- 1) Exhaust the air in the tyre completely. Take down the valve cap and put the tyre on the tyre lifting support (**Fig 8a**). Tread the tyre lifting pedal V3(**Fig 8b**) while the tyre lifting support J lift the tyre to the top, and lay the tyre flatly towards the direction of the installation base(**Fig 8c**)
- 2) Adjust the auxiliary rolling stopper pin (AZ1) of the installation to aim at the rim to fix the hole (**Fig 8d**)
- 3) Use the center shaft and taper sleeve (Z) to align with the center, hold the handle of half nuts (Z1) and press down the sleeve of half nut by thumb to adjust the distance from the taper sleeve upper surface in 5-10mm (**Fig 8e**)
- 4) Tread the center shaft clamping pedal (V2), the center shaft falls and fixes the tyre (**Fig 8d**)

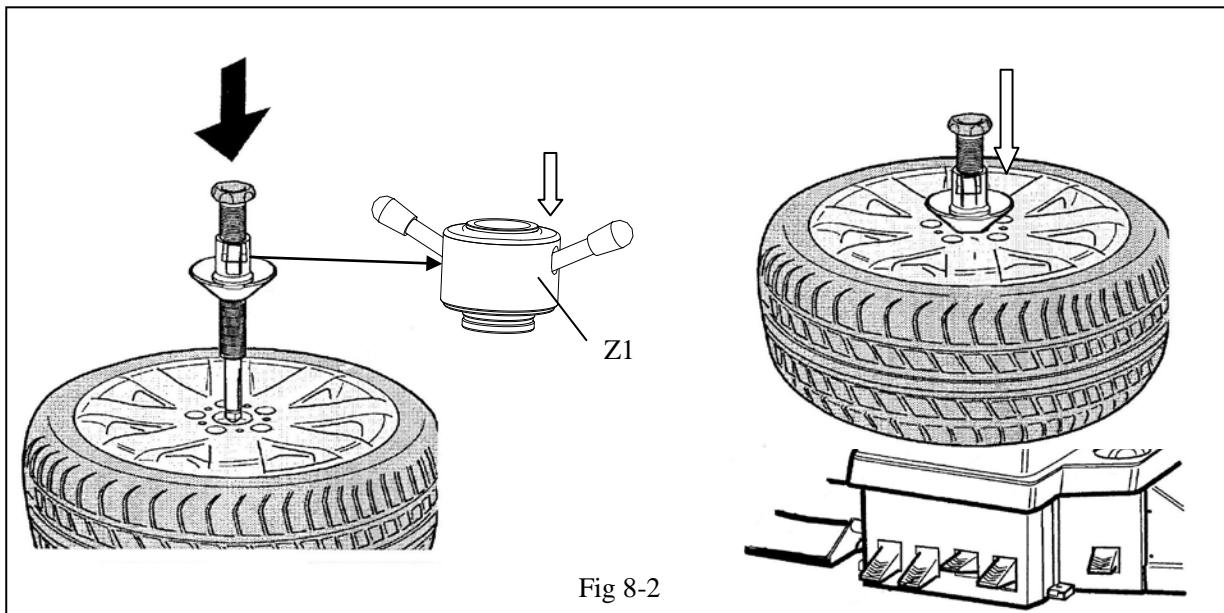

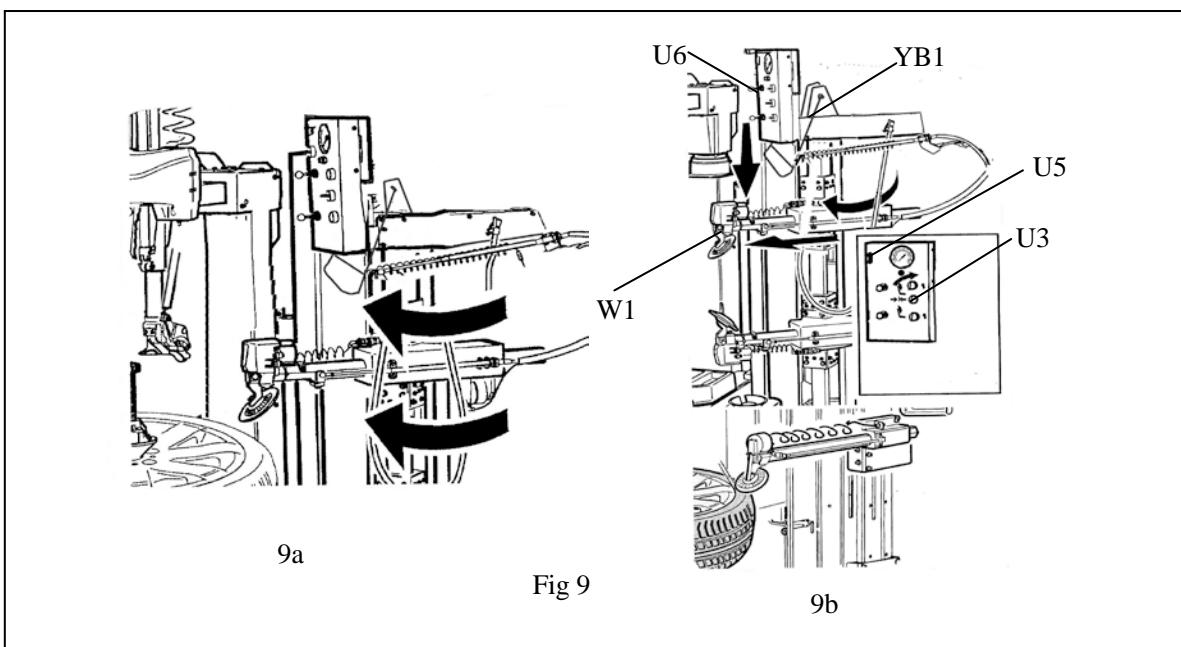

Fig 8-2

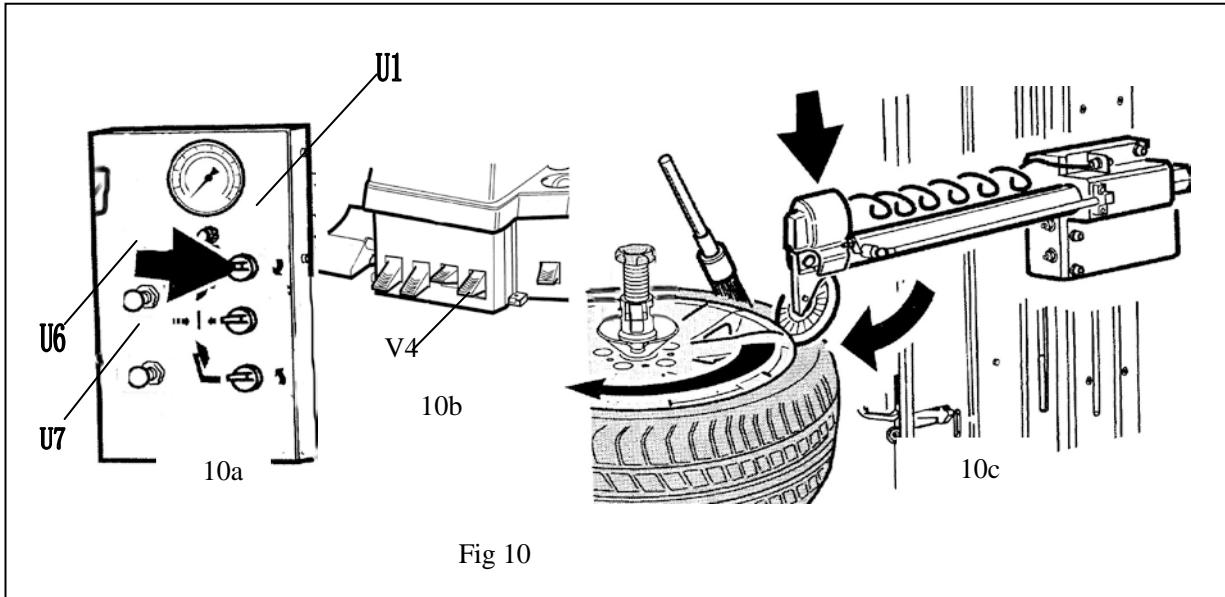

2. Locating the tyre pressing roller:

- Deep press the button U5, release the right arm (YB), pull the handle of the control box (YB1) to turn the right arm towards the rim direction and release the button U5 to lock the right arm(YB) when it reaches at a given position (**Fig 9a**)
- Pull the handle U6 downward, the tyre pressing roller W1 falls to the surface of the upper tyre bead. Keep the button U3 (pneumatic control box)in the original state(the tyre pressing rod is not locked) and pull the handle (YB1)of the control box to adjust the extended length that keep the distance in 2-3mm between the edge of tyre pressing roller and rim. Then wring the button U3 to lock the tyre pressing rod W1 in locked position (**Fig 9b**)

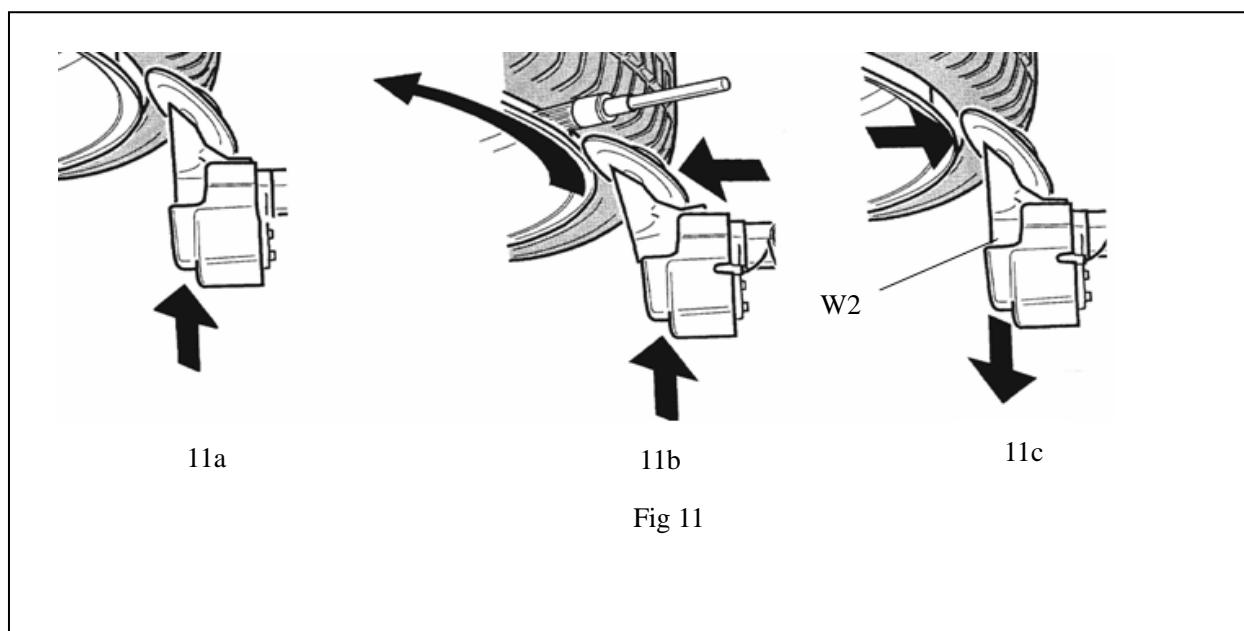

3. Loose the upper tyre bead:

Swing the handle (U6) downward (**Fig 10a**), and the tyre pressing roller W1 lower 10mm on the upper space of tyre. Turn on the control switch of the tyre pressing roller (U2) to rotate its angle and press into the inboard rim to bead. Tread the turntable rotating pedal V4(**Fig 10b**) at the same time. Lubricate the tyre bead and rim while it is rotating until the tyre separates from the rim (**Fig 10c**). Wring the switch U2 to return the tyre pressing roller. Swing the handle U6 upward to lift the tyre pressing roller.

4. Loose the down tyre bead:

Swing the handle (U7) upward (**Fig 10a**), and the tyre pressing roller W2 lower 10mm on the upper space of tyre. Turn on the control switch of the tyre pressing roller (U4) to rotate its angle and press into the inboard rim to bead. Tread the turntable rotating pedal V4(**Fig 10b**) at the same time. Lubricate the tyre bead and rim while it is rotating until the tyre separates from the rim (**Fig 11b**). Wring the switch U4 to return the tyre pressing roller. Swing the handle U7 downward to lower the tyre pressing roller (**Fig 11c**).

5. Locate the active tyre changer hook:

- 1) Keep the locking handle in the position shown as **Fig 12c**. Tread the tilting pedal (V1) to keep the column in vertical state (**Fig 12a**).
- 2) Keep the locking handle (K) in K1/K2 state (**Fig 12b**). Pull the sliding arm (N) with left hand and hold the cylinder rod of tyre changer hook (F) with right hand. Adjust them to the rim edge that close to the protective washer of the tyre changer hook and make the hexagonal rod below approach to the rim edge. Then pull the sliding arm (N) again to make the protective washer of tyre changer hook be close to the rim edge (**Fig 12e**).
- 3) Keep the locking handle (K) in K2/K3 state (**Fig 12d**) and lock the hexagonal rod (M) and sliding arm (N) tightly

Caution: Lift up the active part of the tyre changer hook by operating the pneumatic control valve(I) if the tyre changer hook is not in the default position (**Fig 12g**).

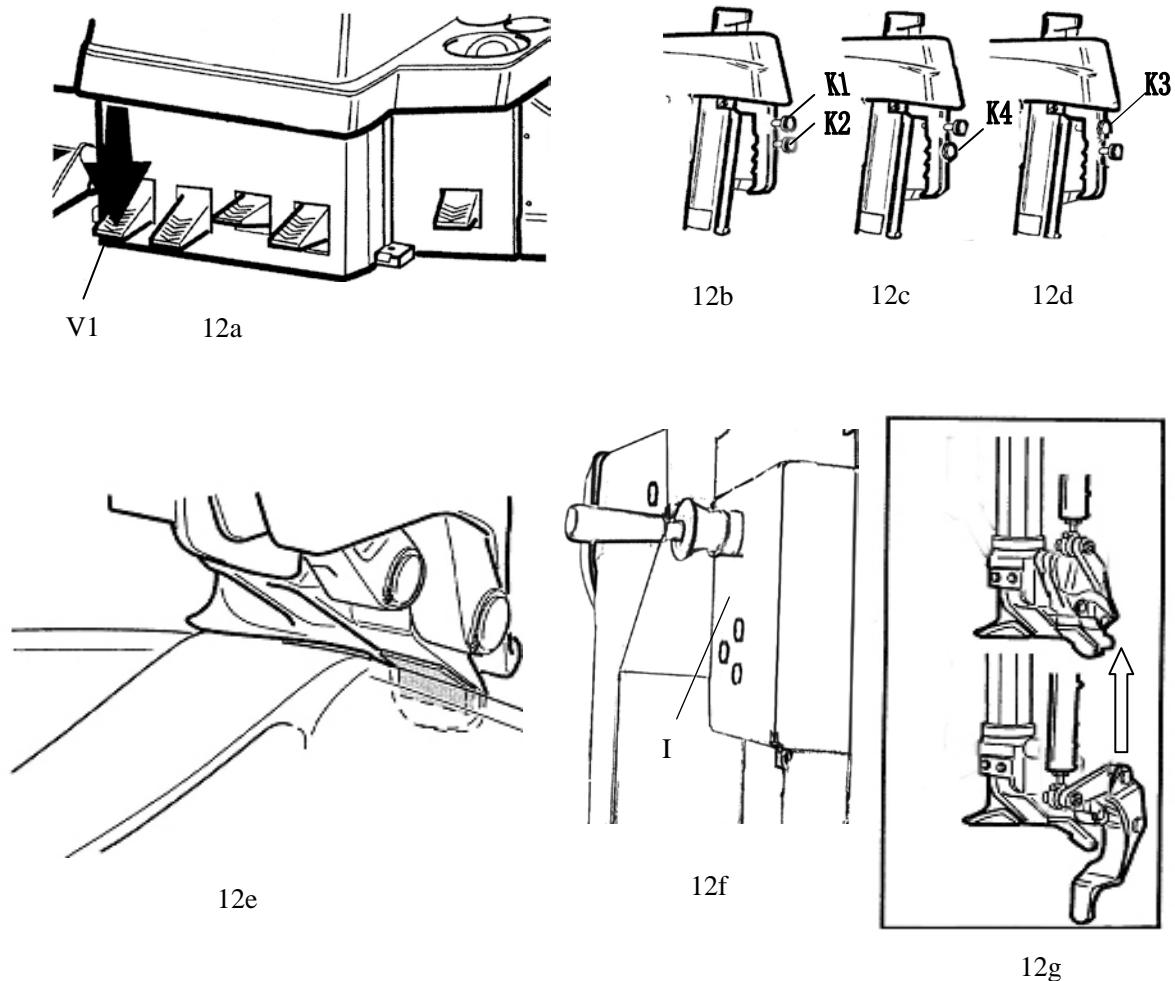

Fig 12

6. Breaking the upper tyre bead:

- 1) Swing the pneumatic control valve (I) of the tyre changer hook downward (**Fig 13a**), the active part of tyre changer hook will go deep into the gap between the tyre and the rim (**Fig 13b**)
- 2) Swing the pneumatic control valve (I) of the tyre changer hook upward, the tyre bead is pulled by the active part of tyre changer hook (**Fig 13c**)
- 3) Tread the turntable rotating pedal V4, the rim starts to rotate and the upper tyre bead is demounted after rotating a cycle (**Fig 13c**)

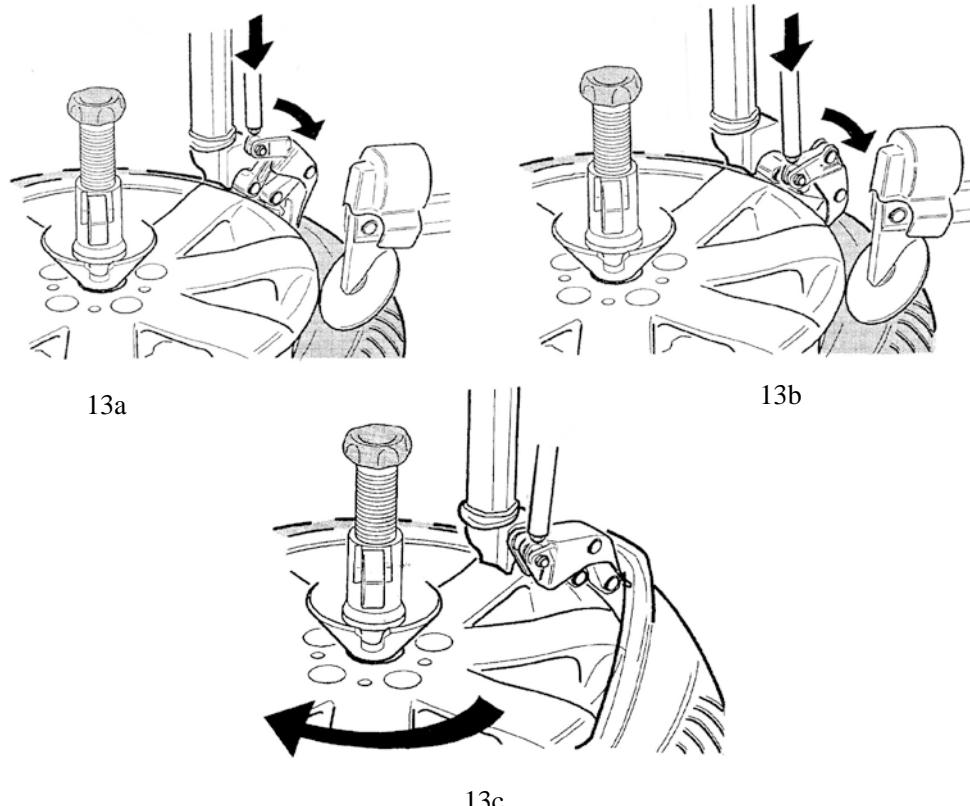

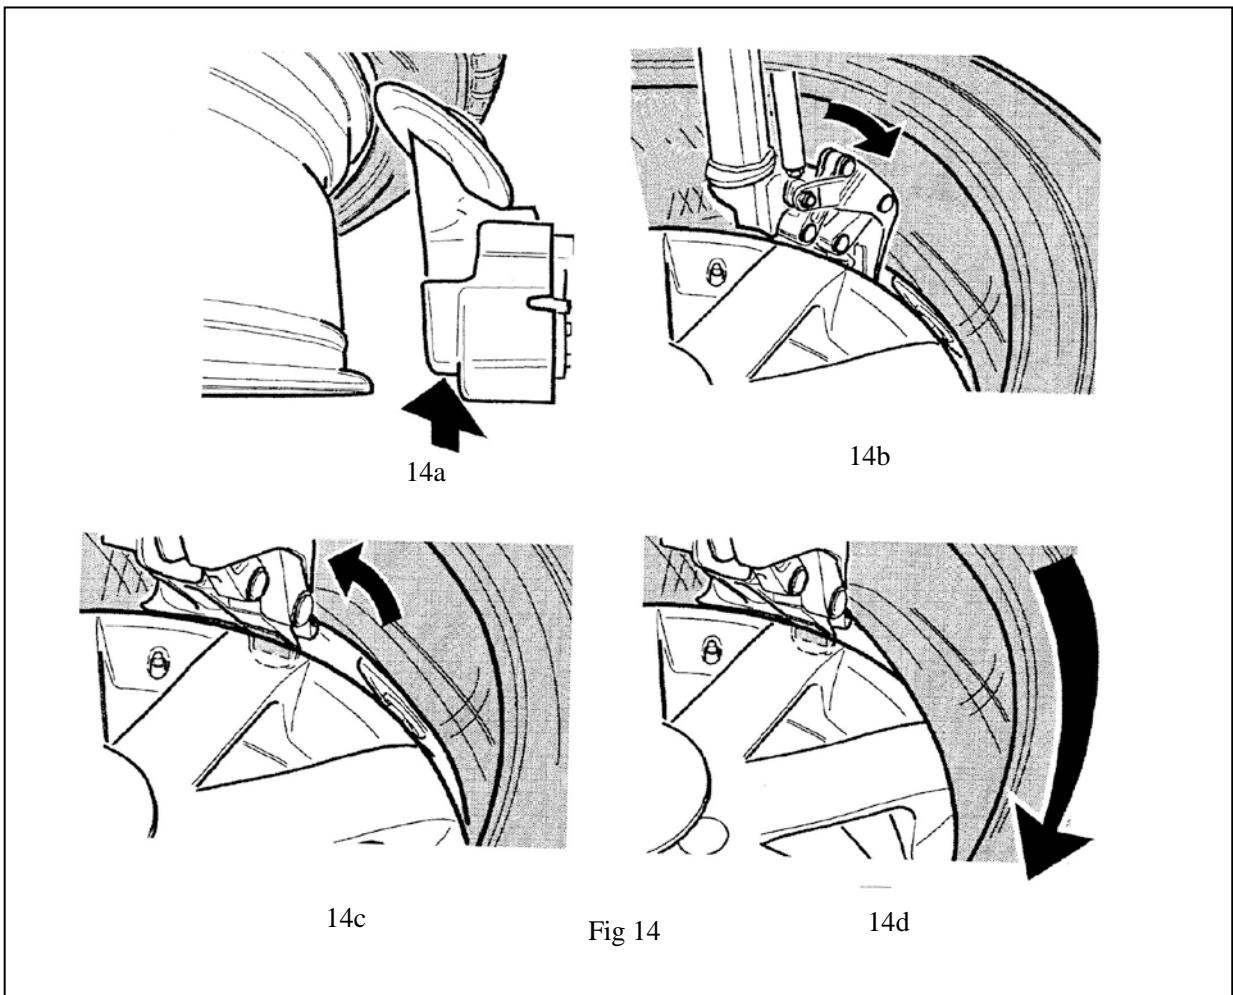

Fig 13

7. Breaking the down tyre bead:

- 1) Swing the pneumatic control button (U6) upward after demounting the upper tyre bead, the tyre pressing roller (**W1**) moves upward and stop moving until the distance between the tyre pressing roller and the upper tyre bead is more than thickness of a tyre.
- 2) Swing the pneumatic control button (U7) upward, the tyre pressing roller drives the upper tyre bead to move upward until the down tyre bead lies on upper rim edge (**Fig 14a**).
- 3) Swing the pneumatic control valve (I) of the tyre changer hook, the active part of tyre changer hook will go deep into the gap between the tyre and the rim (**Fig 14b**). And then swing the pneumatic control valve (I) of the tyre changer hook upward, the tyre bead is pulled by the active part of tyre changer hook (**Fig 14c**).
- 4) Tread the turntable rotating pedal V4, the rim starts to rotate and the upper tyre bead is demounted after rotating a cycle (**Fig 14d**).

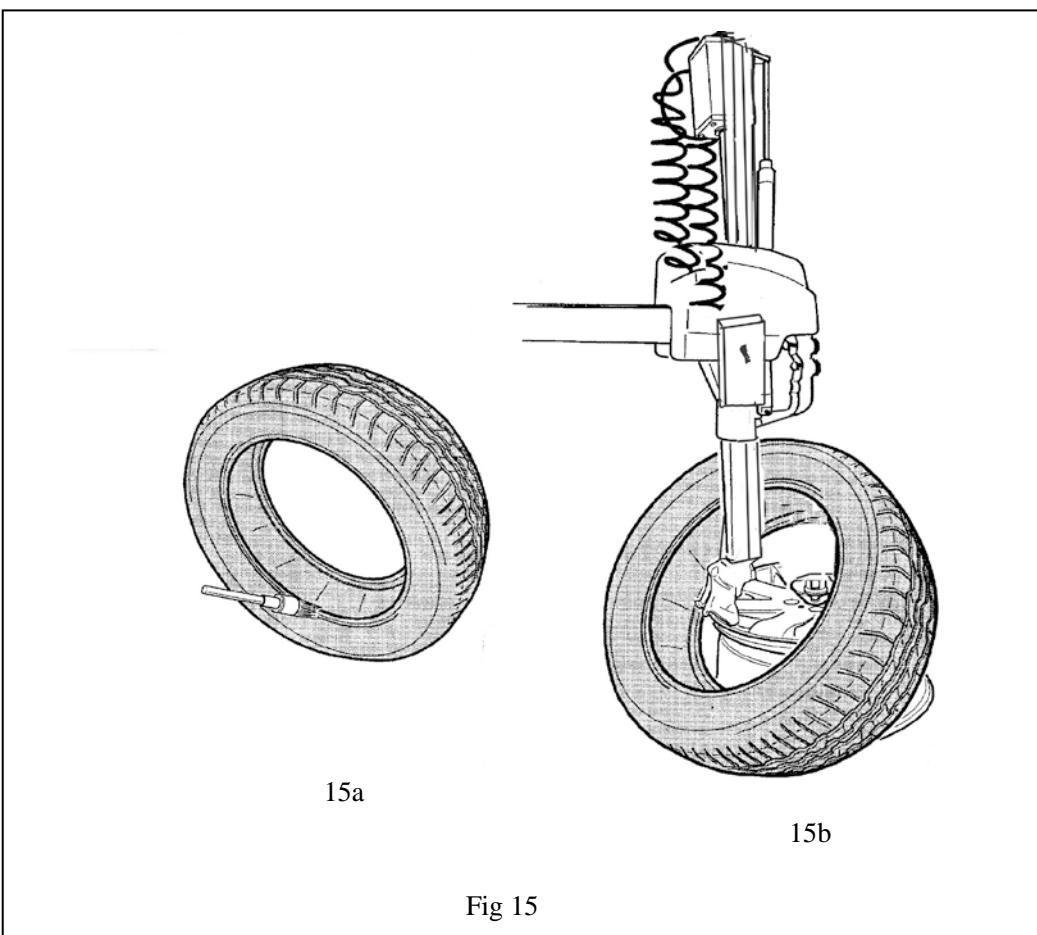

8.2 Mounting the tyres

1. Check the tyre and the rim.

Caution: Please check the tyre and the rim before installation, it is important to prevent the tyres from cracking during the inflation and installation of rim. Do not install the tyre when there is any damage found on the tyre and curtain fabric. The tyre rim has dents and upheaval, which may cause internal micro cracks invisible to the naked eye and damage the rim. Also it can bring dangers during inflation.

Caution: Make sure the rim diameter and tyre diameter are the same. The rim diameter is marked on the tyre rim, also the tyre diameter is marked on the side wall of tyre. Do not install tyre when uncertain.

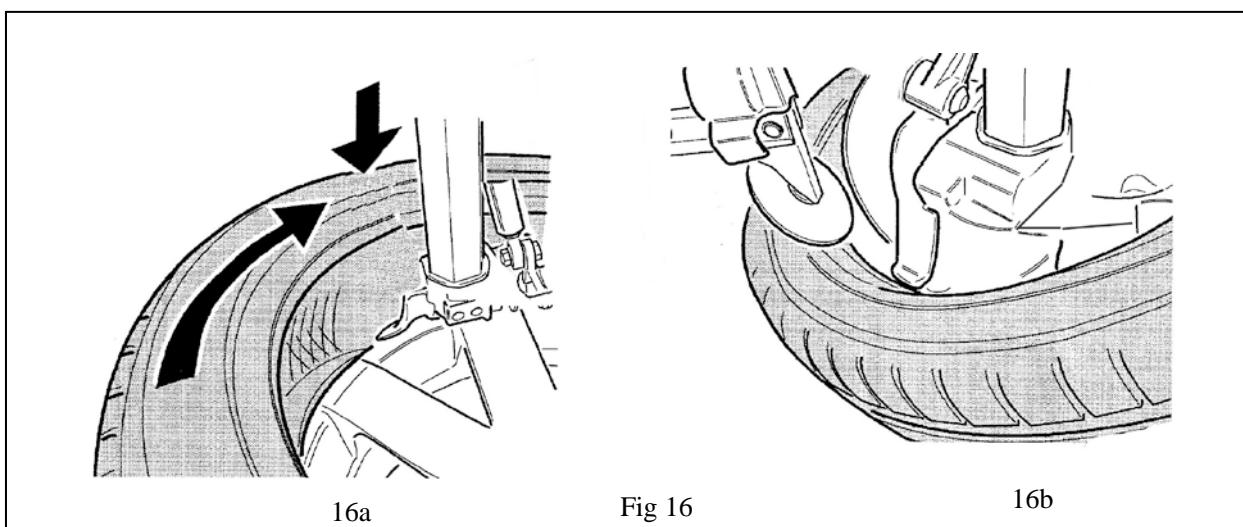

2. Lubricate the tyre bead and rim with lubricants recommended by the manufacturer (Fig 15a).
3. Put the tyre on the rim (Fig 15b).

4. Installing the down tyre bead.

1) Swing the pneumatic control valve (I) of tyre changer hook upward to make the active part of tyre changer hook back to the original state. Operate the combined control valve (K) ,make the protective washer of tyre changer hook close to the rim and the down tyre bead lay under the fixed end of tyre changer hook.(**Fig 16a**).

2) Press the tyre a little. Tread the turntable pedal (V/4), the tyre rim rotates a cycle and the down tyre bead is installed (**Fig 16b**).

5. Installing the up tyre bead.

1) Keep the height of tyre pressing rod as same as the tyre rim by operating the rotary knob U6/U3.Lock the tyre pressing roller W1 tightly. Operate the rotary knob U2 to make the tyre pressing roller W1 press the tyre (**Fig 17a**).

2) Install the tyre pressing device manually and make distance about 3-4cm from the tyre pressing roller. Lock it tightly on the rim edge (**Fig 17a**).

3) Tread the pedal (V4) to rotate the rim, and the tyre is pulled into the rim gradually. Release the pedal V4 when the rim turns half of a cycle. Swing the help arm push valve (S) to lower the tyre pressing head. Press the tyre with 4-6cm downward and notice not to press the rim (**Fig 17b**).

4) Tread the pedal (V4) to rotate the rim. Release the pedal V4 when the manual tyre pressing head keep 10-15cm from the tyre changer hook, then the tyre is installed on the rim. Operate the combined control valve (K) to keep itself in K3 state. The hexagonal rod rises and the mount/demount head leaves the tyre surface (**Fig 17c**).

5) Swing the help arm push valve (S) to lift up the tyre pressing head (L). Pull the help arm back to its original position, tread the turntable rotating pedal (V4) and demount the manual tyre pressing device when it rotates to a suitable place for demounting (**Fig 17d**).

Caution: The installation base always rotates clockwise when demounting and installation. It is only used for correcting the operation mistake when anticlockwise rotation.

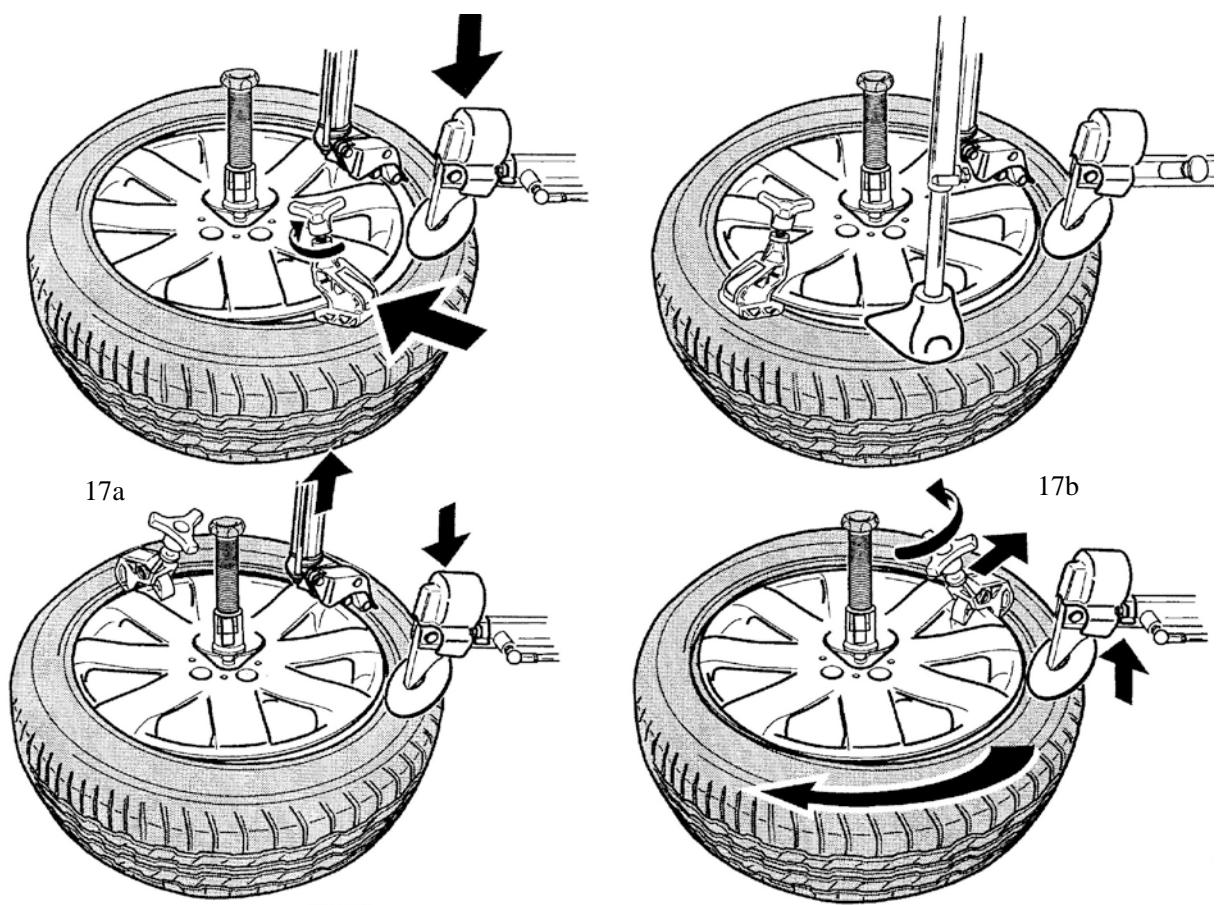

Fig 17

8.3 Inflating the tyres

Importance: It is very dangerous during inflating operation, take carefully and comply with instruction. When inflating, it will turn to be extremely dangerous if problems happen to tyre or rim. The possible burst force can make the tire go upward and outward, and the big power may cause injury or death to the operator or the people around.

Tyre may burst caused by following:

- 1) The wheel rim and the tyre are not of the same size;
- 2) The tyre or the wheel rim is damaged;
- 3) The pressure of tyre inflation is over the max. pressure recommended by manufacturer;
- 4) The operator fails to comply with the safety regulation;

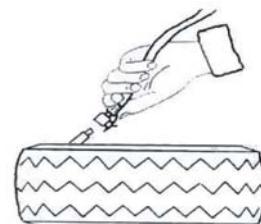

Fig 18

Please operate as follows (Fig 18):

- 1) Remove the valve cap from the valve stem;
- 2) Check to make sure the air nozzle is pressed down completely over the threads of the valve stem.
- 3) Check to make sure that the tyre and the wheel rim are of the same size;
- 4) Check if the tyre bead and wheel rim are well lubricated, additional lubrication is required if needed;
- 5) Inflate the tyre with break, while inflating, check the pressure listed on the pressure gauge, also check whether the bead is fixed or not. Repeat operation above until the bead is secured; you need take special steps when inflating convex rim or double convex rim;
- 6) Continue inflating and check the air pressure frequently until it reaches to the required pressure.

Note: Never exceed the max. inflation pressure given by the tyre manufacturer.

Keep hands and body away from inflating tyres.

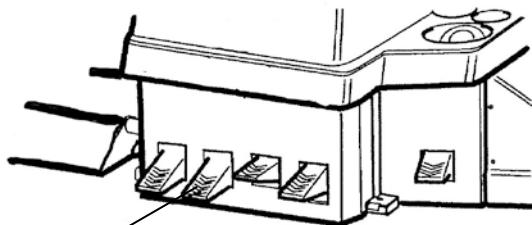

Only specially trained persons are allowed to perform the operations, do not allow other to operate or be near the tyre changer.

8.4 Tripping out the tyre and the center shaft

Tread the center shaft clamping pedal (V2), the center shaft is released. (**Fig 19a**);

Take down the center shaft (**Fig 19b**);

Take down the cone block.

V2

19a

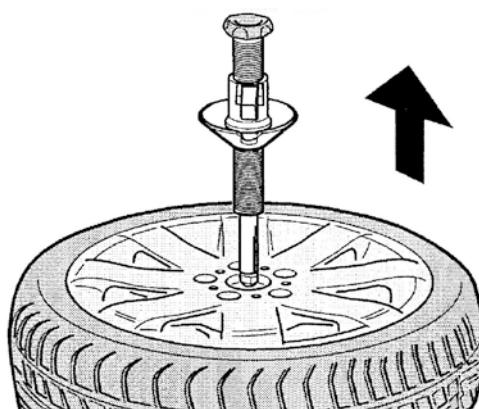

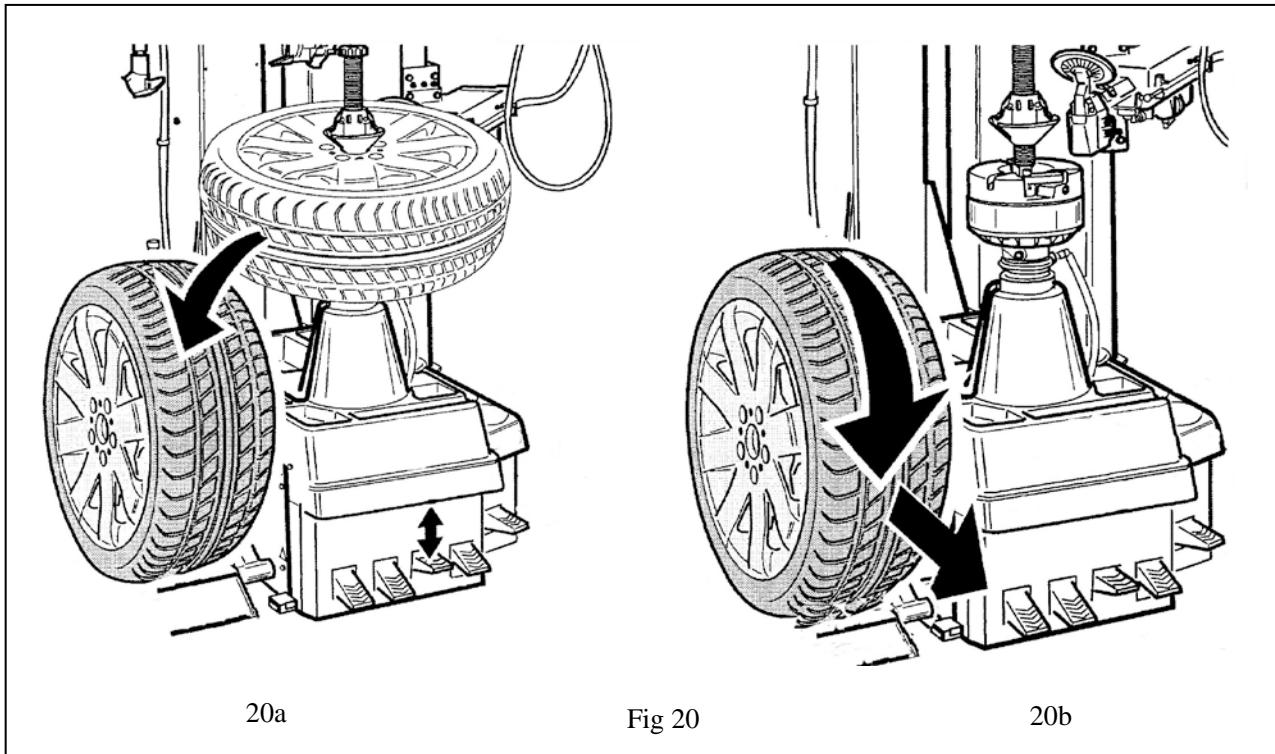

Fig 19

19b

8.5 Take down the tyre

Tread the tyre lifting pedal (V3) to lift up the tyre lifting device (J). Put the tyre on the tyre lifting device (**Fig 20a**);

Tread the tyre lifting pedal (V3) to lower the tyre lifting device (J). Remove the tyre from the tyre lifting device (**Fig 20b**).

9. Moving machine:

Please use forklift to move the machine. Disconnect the tyre changer from the electricity power supply and pneumatic power supply, lift the base board and insert the feet of forklift. Then mount the tyre changer machine to a new position and fix it tightly.

Note: The place chosen for fixing the tyre changer must meet the safety regulation.

10. Maintenance:

Caution: only the professional persons can do the maintenance. To prolong the machine's life, maintain the machine timely according to the manual. Otherwise, it will impact the reliability of the machine or even cause injury to operator and others nearby.

Caution: before performing any maintenance, disconnect the tyre changer from the electric power supply and pneumatic power supply, and depress the Jaws open and close Pedal or Turntable Rotation Pedal for 3~4 times to evacuate all compressed air from the machine. Damaged parts must be replaced by professional persons with the spare parts provided by manufacturer.

- 1) If hexagonal pressing rod not be locked or not meet the requirement that 2-3mm from the bottom of Mounting head/demounting head to rim, please adjust hexagonal locking plate, refer to **Fig 21a** and adjust the (X).
- 2) In the event of installation base lose power, check to see if the belt is tight as follow steps:
Remove the left side cover by unscrewing the screws; adjust two screws located on the motor support (**Fig 21b**), keep a suitable distance between motor support and motor base; tight the screws for the belt tension.
- 3) Keep the control valve of the tread pedal clean if the tread pedal is delaying. Open the left side cover and remove the part connected with the valve (**Fig 21c**). Use the compressed air to clean the muffler (release valve). Replace it if it is broken.

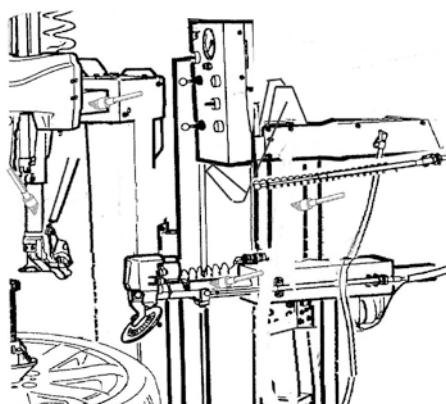

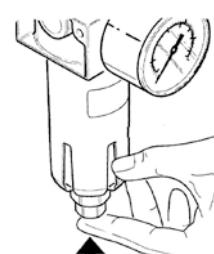

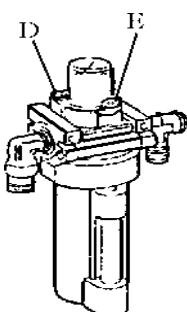

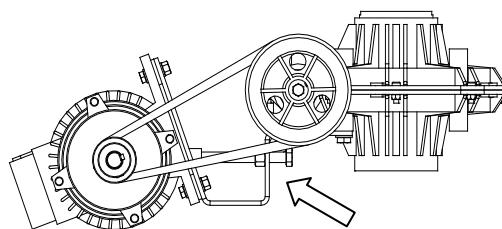

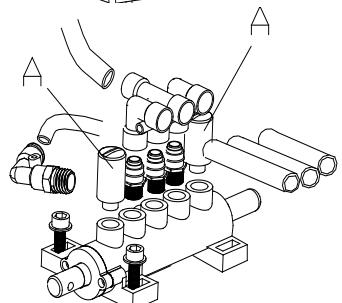

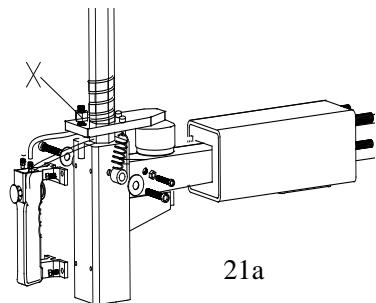

Following maintenance must be done at least once per month:

(1)Check oil level in Oil Fog Maker, please be filled with SAE30# oil if need. Unscrew with hex wrench (E). Based on connection of compressed air, first to depress Jaws open and close Pedal or Turntable Rotation Pedal 5-6 times, and then check whether oil in Oil Fog Maker drops down a drip of oil. For continuous operation, depress twice every time, drop down a drip of oil, otherwise adjust the screw (D) that controlled oil enter with minus screwdriver (**Fig 21d**).

(2)Release the water in the air inlet pressure regulating valve. Press (H) manually and the water is ejected (**Fig 21e**).

(3)Lubricate the lifting guide, tyre pressing rod, hexagonal pressing rod and all the active parts (**Fig 21f**).

(4)Use the dry cloth to clean the machine body and the organic solvent is prohibited.

21f

Fig 21

11. Trouble shooting table

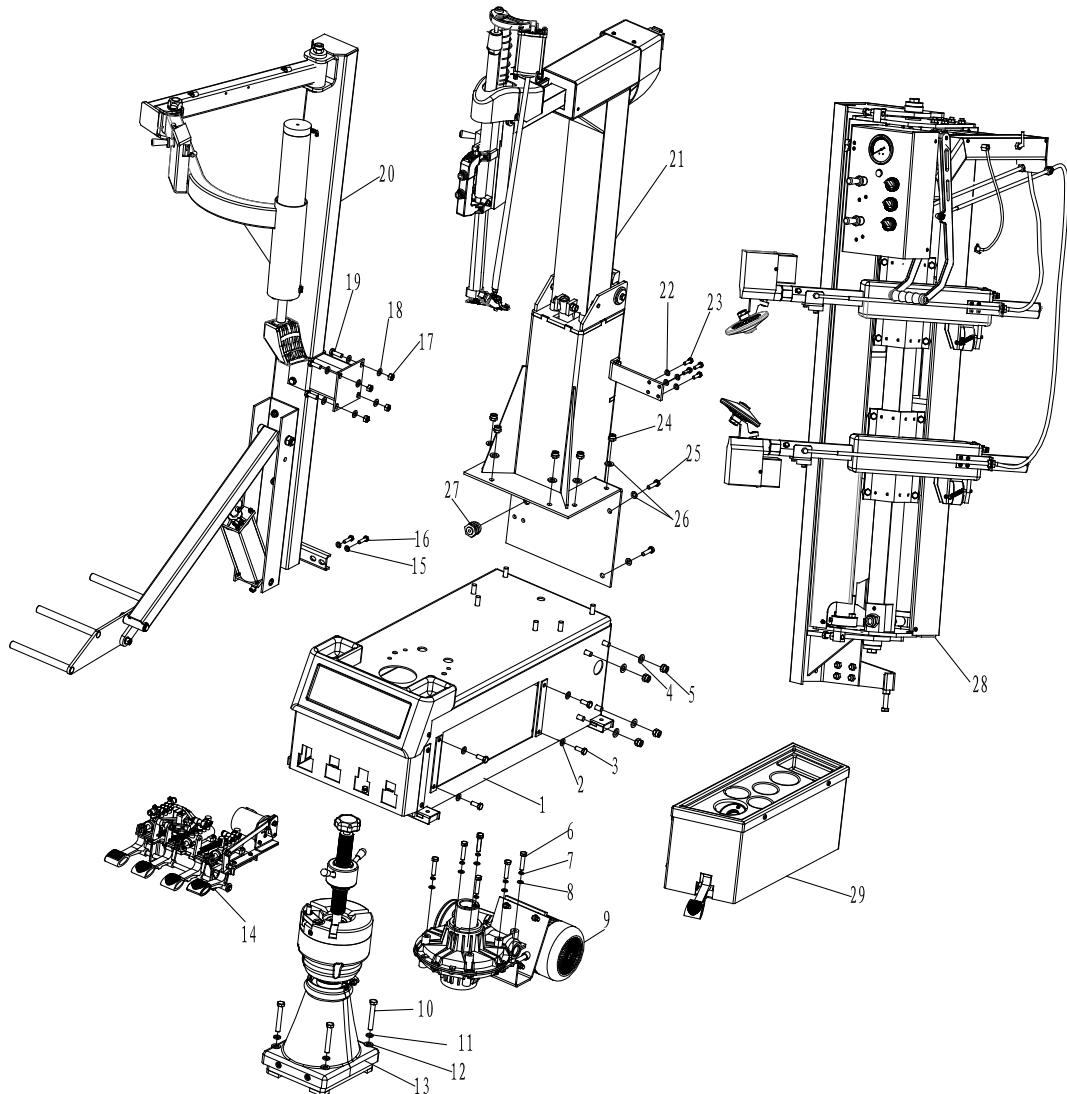

Problem	Reason	Solution
The installation base rotate just in one direction or can't rotate.	Reverse Switch broken	Replace the Reverse Switch
	Belt broken	Replace the belt
	The Motor's malfunction	Replace the motor
Demount or fix the wheel, the center shaft can't lock (spin with wheel);or it delays to work	Leakage of Air network	Check all the parts on the air network.
	The installation base cylinder can't work.	Replace the cylinder piston.
	The low air pressure	Adjust the air source
The demount/mount head always touch the rim during operation.	The locking plate incorrectly adjusting.	Replace or adjust it.
	Screws on the chuck loose; the Hexagonal Vertical Arm can't be locked by Locking Plate	Tighten the screws; replace the Locking Plate.
The tyre lifting support can't work	No air source or air pressure is not enough	Adjust the air source

If the inspection cannot solve the problems above, please contact our technical person.

12. Storage

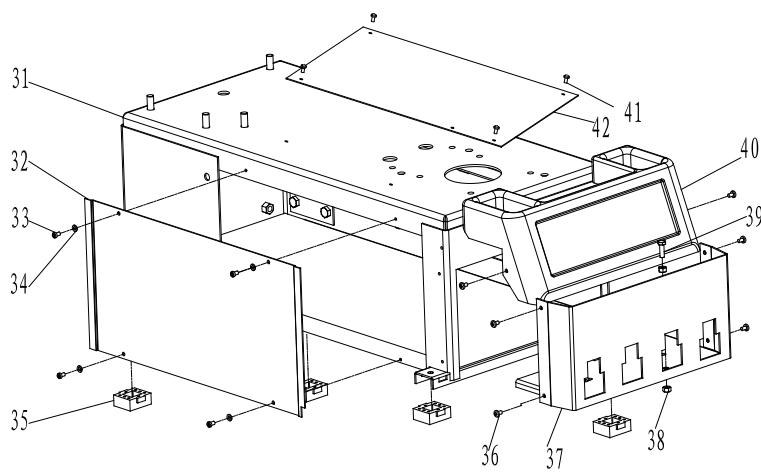

If the equipment needs to be moved to other place and arranged new working place because of other reasons, please cut off the power supply and air source, use forklifts and lifting system to move the equipment to a new place and place it as required.(The process must be under the condition of technical person on the scene) Spray the anti-dust oil on each moving guide rail and eject the oil in the oil pump if the equipment is not used over three months. Twine the equipment outside with protective film and cover the packing box.

563	C-200-380000-0	Pedal spring	590	S-030-010806-0	Throttle valve
564	C-200-061500-0	Cam	591	B-024-290-121-0	Cross head screw ST2.9*14
565	C-200-810000-0	Cam washer	592	C-200-060901-0	5-way valve(right)
566	B-010-060201-0	Hex socket head screw M6x20	593	C-200-061100-0	5-way valve cover
567	B-040-061210-1	Flat washer Ø6	594	C-200-061000-0	5-way valve rod spacer
568	CW-110-021102-0	Complete 5-way valve(tilting)	595	S-000-012400-0	O-seal 12*20*4
569	B-019-290121-0	Cross head self tapping screw 2.9*12	596	S-012-010808-0	Quick union 1/8- Ø 8
570	CX-200-060500-0	Cam cover			
571	CW-110-020001-0	Complete 5-way valve for bead breaker cylinder			

14. Pneumatic diagram

- (1) Air supply
- (2) Filter
- (3) Pressure reducer
- (4) Oil fog maker
- (5) Left help arm cylinder
- (6) Tyre pressing roller cylinder
- (7) Right help arm cylinder
- (8) Tyre pressing rod locking cylinder
- (9) Tyre pressing rod raise-fall cylinder
- (10) Tyre pressure control valve
- (11) Inflating pedal
- (12) Tyre lift pedal
- (13) Centre shaft locking pedal
- (14) Tilting arm cylinder pedal
- (15) Horizontal arm handle
- (16) Inflating hose
