Tyre Changer

1. Introduction

Automatic tyre changer equipment was designed to mount/demount the tyre from the wheel rim. This series of tyre changers was designed to mount/demount larger and heavier tyre from the wheel rim which diameter from 254mm to 762mm. Different with transitional turntable, the center flange positioning could reduce the harm of the wheel rim, and more efficient. The characteristic of this tyre changer is: operating smooth and efficient with both pneumatic and hydraulic; installing the tyre easier by the automatic lifting system; positioning wheel rim by the center flange positioning design; Moving the wheel by the special working platform; operating by the multifunctional helping arms; special structure of the mount/demount head; observing by the camera and display.

2. Safety Regulation:

Please read the manual carefully with fully understanding. Manufacturer shall not be liable for any damage or injury caused by failure to comply with these regulations.

Warning: This instruction is important for the machine, read carefully before installation and operation; also it is important for safe use and maintenance of machine. Please keep this manual kindly in order to use it further.

Caution: Use only for purpose for which it is designed, don't use it for other purposes. Manufacturer shall not be liable for any damage or injury caused by failure to comply with these regulations.

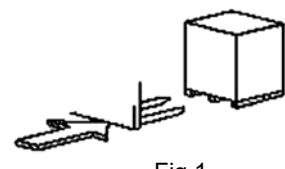

Use of this machine is especially reserved to trained and qualified professional persons. Any changes on this machine without manufacturer's permission may cause the malfunction and damage to machine, manufacturer can cancel warranty coverage for above. If some parts are damaged due to some reason, please replace them according to the spare parts list. (Attention: warranty is one year after manufactures' delivery date; warranty excludes the easy-broken parts). Manufacturer shall not be liable if customers change the equipment without permission. (Especially for the pneumatic and electric parts)

3. Technical data:

Wheel Rim Dimensions	8 " -30 "
Max. Wheel Width	16 "
Max. Wheel Diameter	1250mm (49 ")
Working air pressure	8-10bar
Hydraulic pump pressure	80~120bar
Power supply	220v(1ph)/380v(3ph)
Motor power	1.1kw(1.5hp)
Max. torque	1078N•m(110Kg.m)
Bead breaker force	1400kg
Single package overall dimension	1880×1550×1840mm
Noise	<75dB
Net weight	550kg

4. Transport:

The machine should be transported with original package, and place it according to the label on the package. Machine within package must be transported by the forklift, and positioned as shown as the Fig 1.

5. Unpacking:

Pull out the nail which is nailed on the plate with tip jaw; unpack the carton and plastic cover. Check to make sure all parts shown on the spare parts list are included. If any parts are missing or broken, please do not use the machine and contact the manufacturer or dealer in time.

6. Workplace Requirement:

Choose workplace in compliance with safety regulations. The floor must be smooth and level, this tyre changer required the 2.9m*2.1m working space, the minimal height is 2.4m. Connect power supply and air source according to manual, workplace must have good air condition; in order to make the machine run well, its workplace requires at least 0.5m clear space from each wall shown as Fig 2. If installing it outdoor, it must be protected by roof against rain and sunshine.

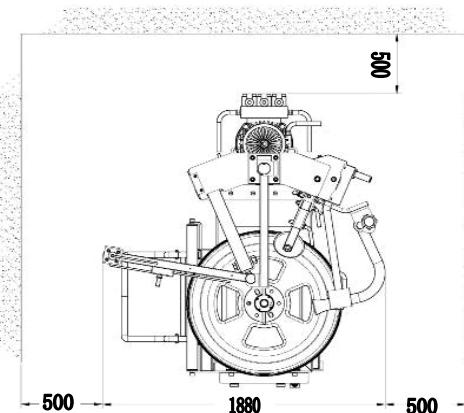

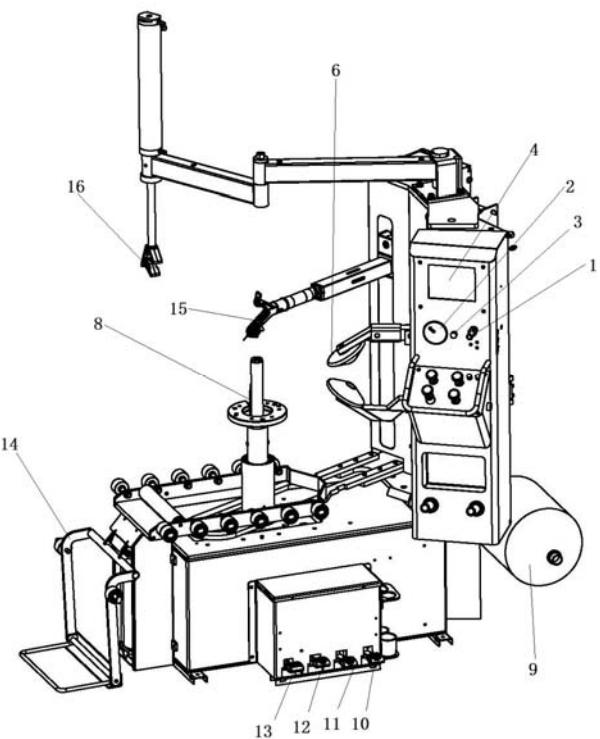

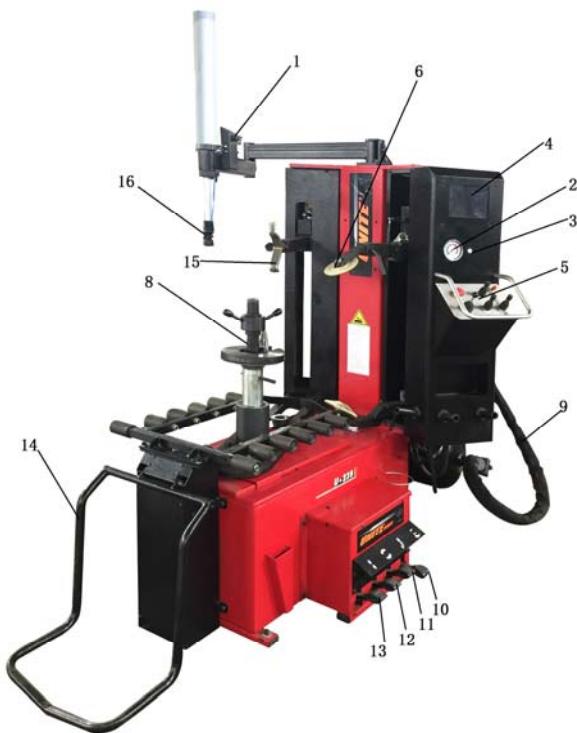

Fig 2

Warning: the machine with motor must not be operated in explosive atmosphere!!

Important attention: Confirm the voltage values from the supply are as same as the requirement of the machine before connection. Confirm good grounding of power grid and equipped with overload circuit protector! Check the tank weather the amount of oil is enough before first time startup, the filling up of the oil shall not less than 80%. Change the hydraulic oil after 100 hours since first startup, and change hydraulic oil every 1500 hours.

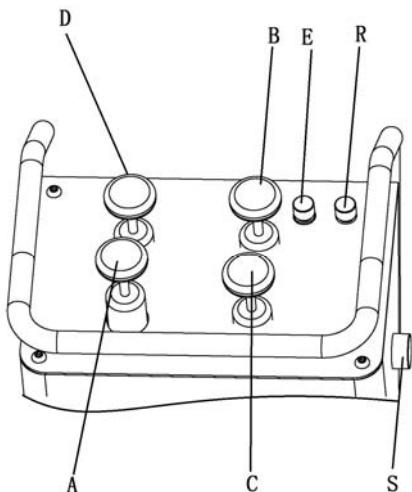

Connect the air circuit system and electrical circuit system. Connect to the air compressor with the air circuit port behind the machine. The electrical system have to has fuse system as protector, good grounding of power grid, and set up the automatic switch on the main power supply for keep from the electric leakage.

7. Machine Operation:

- | | | | |
|-----------------------------|------------------------------|---------------------------------|-------------------------|
| 1. Control valve | 2. Pressure gauge | 3. Overpressure discharge valve | 4. Video monitor |
| 5. Control box | 6. Upper bead breaker roller | 8. Cone | 9. Inflating air faucet |
| 10. Reverse switch pedal | 11. Inflating pedal | 12. Demount hook rotation pedal | |
| 13. Lift/fall control pedal | 14. Tyre support | 15: Demount hook | 16: Mount/demount head |

Warning: Keep the hands and body away from the rotating part of the machine during operation. Wear the tight sleeve and body-hugging clothes, do not wear necklace, bracelets and oversize clothes.

- Key A: Mount/demount hook moves (up, down, left, right) ;
- Key B: Upper bead breaker disk moves(up and down);
- Key C: Lower bead breaker disk moves (up and down) ;
- Key D: Tyre fitting seat moves (front and back) ;
- Key E: Monitor switch;
- Key R: Standby/restart;
- Key S: Emergency cut-off;

Turn on by using the switch behind the body of machine before operating. (Fig 4)

4)

Hydraulic unit will standby after running for two minutes as default setting. The time setting can be changed by open the electrical cabinet and set by adjust the time relay. (Fig 5)

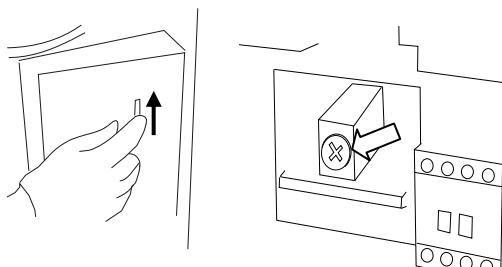

Fig 4

Fig 5

7.1 Demounting the tyre

1. Take out the valve core to deflate the tyre. Roll the tyre onto the wheel lift 14. Depress the lift pedal 13 to raise the tire up to the full height by the wheel lift 14 until the lift cradle goes to 90 degrees, and then slip the tire over the turntable 8. Depress the lift pedal 13 to lower the wheel lift to the lowest position and align a lug hole on the rim with the alignment pin on the turntable so that the pin goes into the lug hole. Install the quick locking nut to the central post. Tighten it securely. (Fig 6)
2. Adjust the flange center position by the controller; lower the upper bead breaker disk to within 20mm over the rim until the upper bead is broken away from the wheel rim, lubricate as shown in Fig 7 within depress the rotating pedal. Raise the lower bead breaker disk; by pressing up its controller on the control panel to break the lower bead away from the wheel rim, and then lubricate the tire beads with depress the turntable rotation pedal until full lubrication (Fig 8)
3. Lower the upper bead breaker disk over the rim until the upper bead is broken away from the wheel rim by the controller. Set the tool head hook pointing down by operating the joystick; bring the hook of the tool head to within 10mm over the rim, depress

the rotating pedal, the turntable rotates until the lower bead is broken away from the wheel rim; reset the bead breaker disk by pressing its controller on the control panel.

4. Adjust the lower bead breaker controller; Raise the tool head tab until the lower bead is 10mm – 20mm above the upper lip of the rim. Use the video monitor to observe the distance between the bead breaker and the wheel rim around 5-10mm. Depress the turntable rotation pedal to rotate the turntable clockwise until the lower bead is off the rim. (Fig.9)

Attention: For keeping inner tube from the pressure, please position the valve core at 10mm the right side of the tool head while operating.

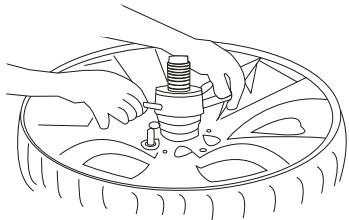

Fig 6

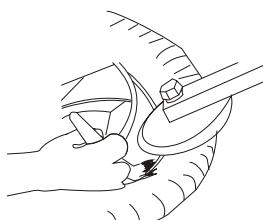

Fig 7

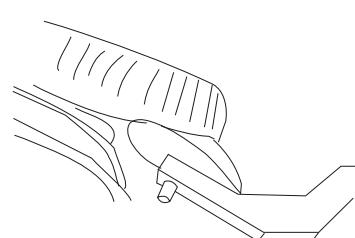

Fig 8

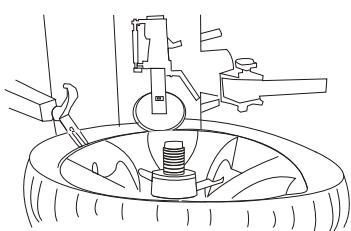

Fig 9

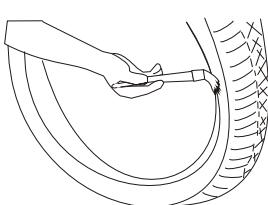

Fig 10

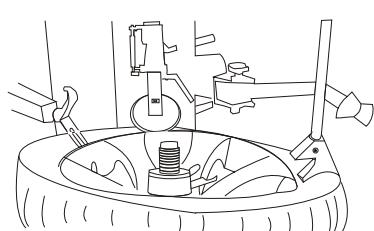

Fig 11

7.2 Mounting the tyre

1. Check the tyre and wheel rim

Warning: It is utmost important to check the tire and rim to prevent tire explosion during the inflating operations. Do not mount if the tyre and the cord fabric are damaged. The internal micro-cracks are not visible to naked eye. This can compromise the rim and can also be a source of danger especially during inflation.

Attention: Make sure the diameter of the rim and tire are exactly the same. Find rim diameter on the tyre and the tyre diameter on the rim; Never try to mount a tire on a rim if you cannot identify the diameters of both.

2. Lubricate the tire beads and wheel rim with the special grease which is suggested by the manufacturer. (If the wheel already be took out from the turntable, please install the wheel again) (Fig 10)

3. Set the tool head tap pointing down by pressing the tool head pedal. Lower the tool head to the position with 10-15mm to the wheel rim; put the tyre on the wheel, position the tyre rim on the straight hook of the tool head, depress the rotating pedal, lower bead mounting complete after turntable rotates one round.

4. Move the lower bead breaker disk upward, lower the tool head tab side down and hook on to the tyre rim by press the tool head control pedal.

5. Move the lower bead breaker disk downward; set the lower bead breaker roller and tubbiness press disk to the position with 40-50mm to the upper plane of the wheel.

6. Press the tyre by the upper pressing head block and then press the turntable rotating pedal, upper bead mounting complete after turntable rotates one round. (Fig 11)

Attention: The turntable rotates only in clockwise during mounting and demounting operations; anticlockwise rotating is used only for correcting the operation mistakes.

7.3 Inflating

⚠ Caution: Operation of inflating is extreme dangerous!! Operator should be careful and follow the operation rules. It is extreme dangerous if the tyre and wheel has any problems during the inflating, the explode might cause the tyre flies up or flies out with great power, the operator and people around might be damaged, even dead.

Attention: Tyre exploding might cause by following:

- 1) The diameter of the rim is not as same as the tyre's.
- 2) The rim or the tyre has damaged
- 3) Inflation pressure exceeds the manufacturer's suggestion.
- 4) The operator's non-execution of the safety requirement.

Remove the valve core; Clamp the valve core with the inflating clamping valve (Fig 12), position the blasting nozzle towards to the rim center just under the rim lip, depressing the inflation pedal and inflate discontinuously, check the pressure from the pressure gage and check the wheel rim if the position is right, control the pressure strictly for keeping from exploding.(Fig 13). If the air pressure is too high, press the deflating button and observe the pressure gage until the value of the gage goes to the prescribed limit.

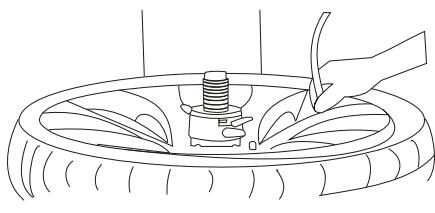

Fig 12

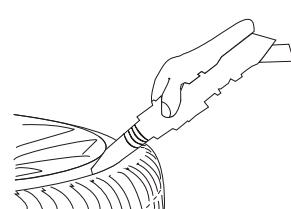

Fig 13

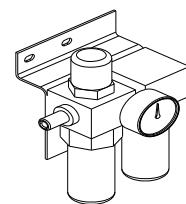

Fig 14

8. Maintenance

Periodical maintenance is necessary for the machine working longer and better; observe the oil line from the oil hydraulic pump, clean and change the oil filter periodically, lubricate the lifting guide rail of the mechanical arm, the lifting guide rail of the tyre lifter and every pin shaft parts, draining the air filter. (Fig 14)

9. Trouble Shooting

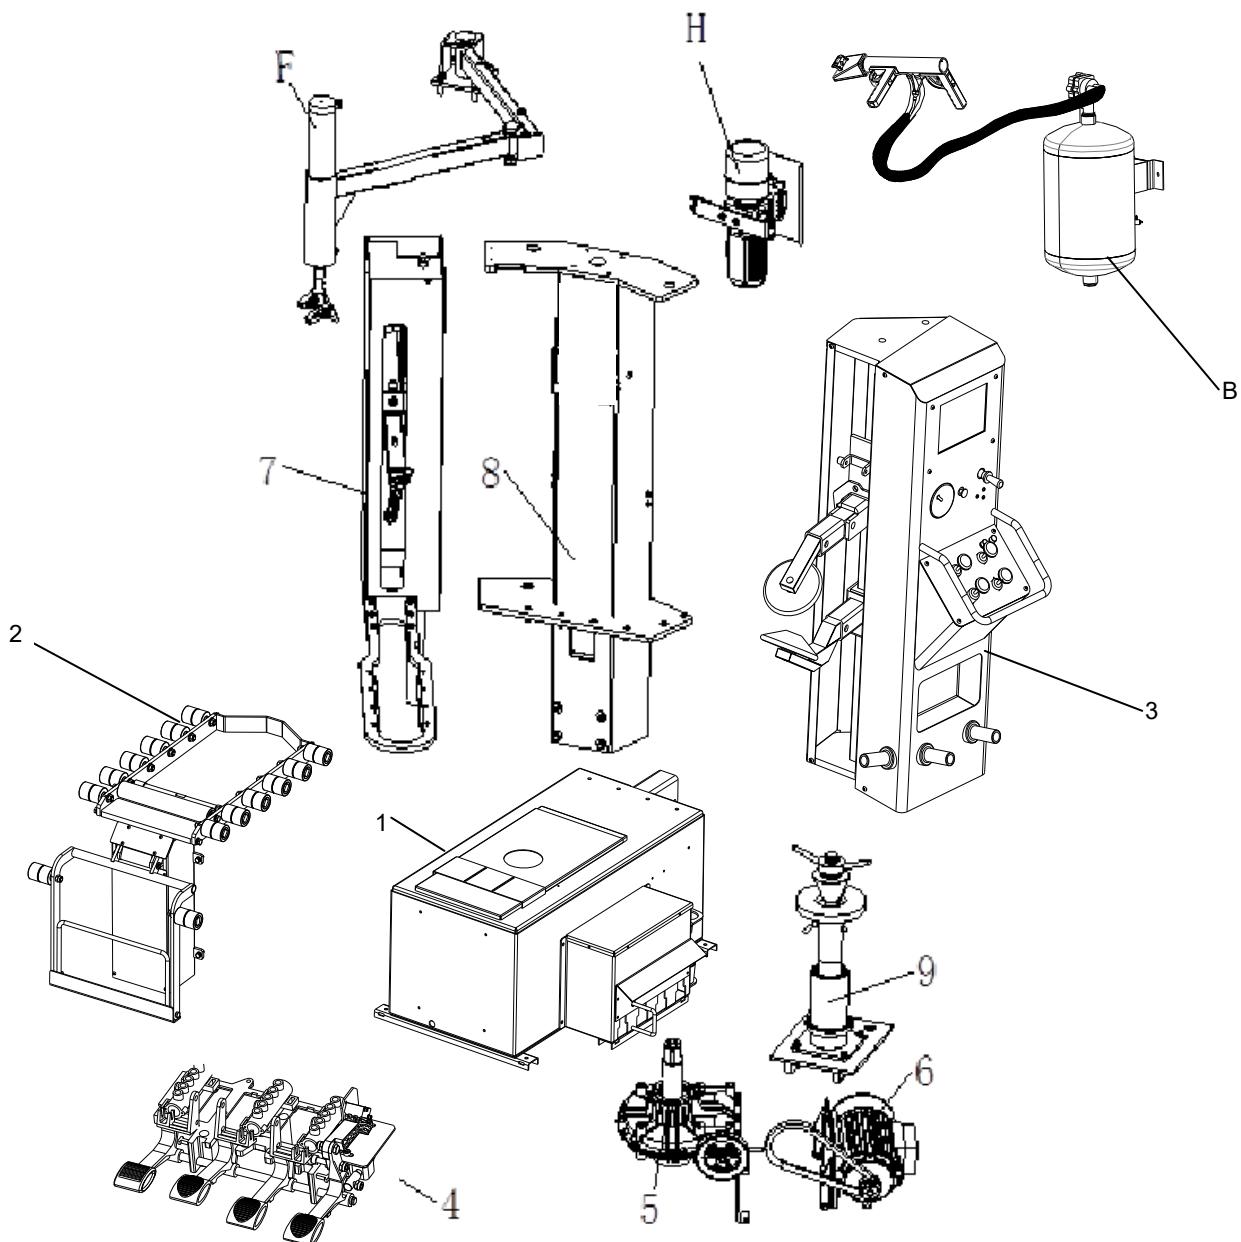

Problem	Reason	Solution
Rotates in one direction or can't rotate	Reverse switch broken	Replace the Reverse Switch
	Belt broken	Replace the belt
	The motor's malfunction	Check the motor cable or terminal block wire; Replace the motor if it was broken.
The jaws delay to open/close; the turntable can't lock or lock incorrectly	Leakage of Air network	Check all the parts on the air network.
	The clamping cylinder can't work.	Replace the cylinder piston.
	Worn jaws	Replace the jaws.
	Broken washers of the chuck cylinder	Replace it.
The mounting head always touches the rim during operation	The locking plate incorrectly adjust or unqualified.	Replace or adjust it.
	Screws on the chuck loose; the Hexagonal Vertical Arm can't be locked by Locking Plate	Tighten the screws; replace the Locking Plate.
Tyre lifting support doesn't work	No air source or lacking air pressure	Adjust the air source
Hydraulic power pack doesn't work	Power supply loose connect	Check circuit
	Electromagnetic switch burned out	Replace it
	The motor burned out	Replace it
	Lacking oil in the oil tank	Refill the oil
Machine working no strong strength	Machine working under the improper pressure	Check and adjust the pressure
	Pump motor is broken	Change it
	The machine working without enough oil	Add the oil
Poor pressurize, automatically decline	Dust in the unloading valve or check valve	Clean the unloading valve and check valve
	Screw of the unloading valve's valve plug loose	Tighten the screw of valve plug
Hydro-cylinder running slow or can't decline	Dust in unloading valve and overflow valve or low setting pressure	Clean and adjust the overflow valve; Replace the sealing element and clean the unloading valve
	The motor running reverse	Replace the connection
	Oil-return shutoff valve too small or jammed	Clean and adjust the shutoff valve
	Unloading valve and sealing element doesn't work	Replace the sealing element
	Wrong direction of the solenoid when install the unloading valve and solenoid valve	Adjust the solenoid

If the problem cannot be solved by the information above, please contact our technician.

10. Storage

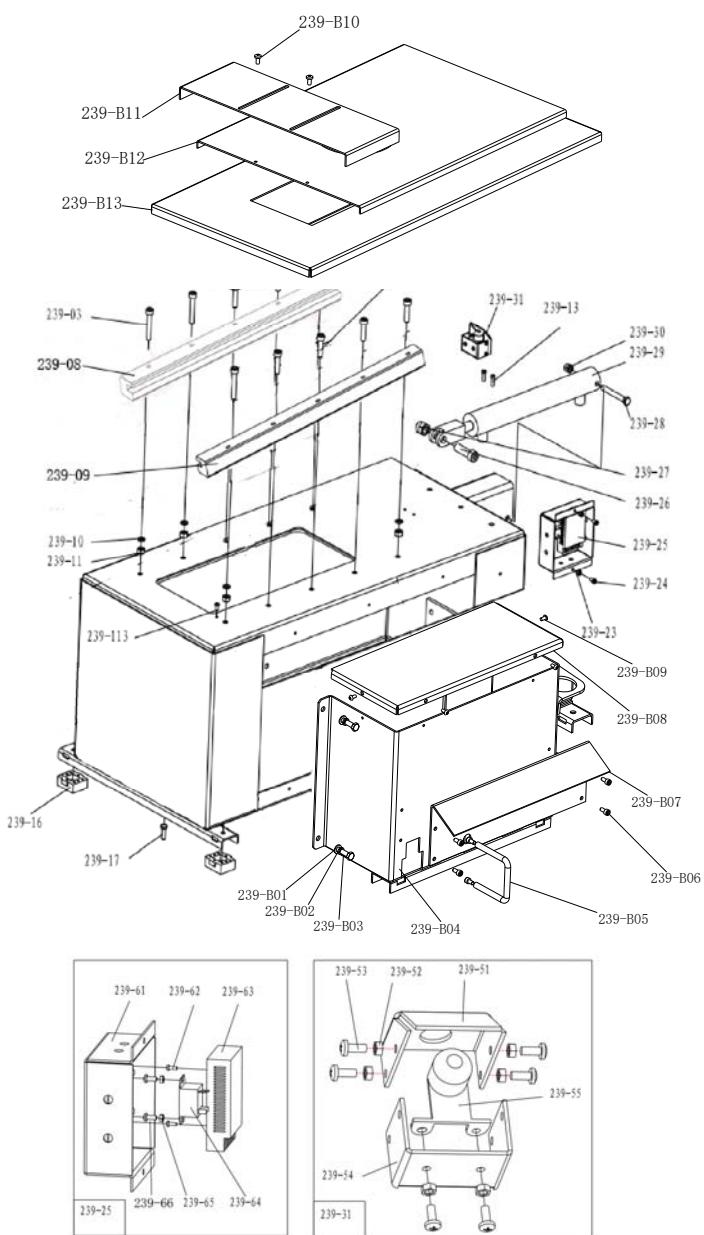

If there has any reason that the machines should be moved to another workplace, arrange the new workplace, disconnect electric supply and air supply, and move the machine to new workplace by using the forklift and lifting system, and place it as the requirement. (This process should be operated with the professional person in there. If the machine is leave unused for three months, please daub the rust preventive oil to each moveable guide rail, empty the oil from the oil hydraulic pump, pack the machine by protective film, and put in the packing case.)

F903	B-010-100301-0	Hex socket head bolt M10*30
F904	CX-009-050000-0	Pressing arm pin $\varphi 28*114$
F905	CX-009-010000-0	Pressing plate
F906	S-012-010806-0	Quick union 1/8-Ø6
F907		Air hose (PU)6*4
F908	C-009-070200-0	Light cylinder back cover
F909	C-009-070300-0	009 cylinder barrel $\varphi 70*76*460$
F910	C-009-070100-0	Light cylinder front cover
F911	C-009-070400-2	Cylinder piston rod $\varphi 25*750$
F912	CW-105-020900-0	Complete 009 help arm cylinder
F913	B-001-060001-0	Self-locking nut M6
F914	C-008-090100-0	Tire pressing head (upper)
F916	B-010-060301-0	Hexagon socket head bolt $M6*30$
F917		Air hose (PU)6*4
F918	CX-007-180500-0	Raise-fall switch base plate
F919	B-017-040301-0	Cross-round head screw M4X30
F920	B-024-050161-1	Screw
F921	S-012-010406-0	Quick union 1/4- $\varphi 6$
F922	S-030-010818-0	Handle valve
F923	B-004-040001-1	Hex nut M4
F924	S-023-010801-0	Muffler 1/8
F925	C-007-181000-0	Control valve protection cover
F926	CX-238-000300-0	Auxiliary pressing arm U2380103
F927	B-017-040161-0	Cross head screw M4*16
F928	B-007-120161-0	Hex socket head bolt M12X16
F929	CX-200-140000-0	Big washer
F930	B-001-160001-0	Self-locking nut M16
F912	CW-105-020900-0	Complete 009 help arm cylinder
F912-1	C-009-070400-2	Left light cylinder piston rod
F912-2	C-009-070100-2	Left light cylinder front cover
F912-3	S-000-025265-0	O-seal $\varphi 25*2.65$
F912-4	S-000-011180-0	O-seal $\varphi 11*1.8$
F9827-12	U-006-000001-0	Guide tape
F9827-8	CX-009-070300-0	Light cylinder barrel
